

Table 1: Experiment A protocol: matched-context row scarcity.

Section	Setting	Value
Design	Scarcity variable	Labeled context rows, N
	Budget levels	N=5k, 10k, 20k, 50k, 100k
	Context construction	Nested stratified row samples
	Class ratio	Positive:negative = 1:1
	Building coverage	703, 724, 725, 725, 725 source buildings
	Meter composition	All meter types; frequencies inherited from sampled rows
Data and models	Features	137 engineered features
	Models	Tree Ensemble; TabPFN (8 estimators)
Evaluation	Holdout	Odd-ID buildings; 724 buildings; 10,137,155 rows
	Metric	PR-AUC by meter; equal-weight four-meter macro
Reproducibility	Seed and draws	42; one draw
