

Table 1: Experiment B protocol: representative source-building scarcity.

Section	Setting	Value
Design	Scarcity variable	Distinct source buildings, K
	Budget levels	K=10, 20, 50, 100
	Row allocation	Approximately 500 rows/building; maximum 50k rows
	Building sampling	Representative nested building ladder
	Anomaly rate	Natural anomaly rate retained from selected buildings
	Meter composition	All meter types in selected buildings
Data and models	Features	137 engineered features
	Models	Tree Ensemble; TabPFN (8 estimators)
Evaluation	Holdout	Odd-ID buildings; 724 buildings; 10,137,155 rows
	Metric	PR-AUC by meter; equal-weight four-meter macro
Reproducibility	Seed and draws	42; one draw
